COLD & FLU PREVENTION

FLU SEASON

According to the CDC, 78% of flu seasons over the past 36 years have had their peak between December & February. Help reduce the spread of germs by washing hands regularly or sanitizing if water isn't available.

Staying healthy not only contributes to a better lifestyle but also to working more effectively, increasing concentration and lowering absenteeism.

PREVENTION

There are a number of ways to reduce contracting and spreading illnesses like the flu.

- Thorough and frequent hand-washing is one of the most effective ways to prevent many common infections. The use of alcohol-based hand sanitizers is also preferable, if soap and water aren't readily available. (Mayo Clinic)
- Wash your hands frequently using soap and water, especially after coughing, sneezing or touching commonly shared items in your house or workplace.
- Cover your mouth and nose. Cough or sneeze into your elbow or upper sleeve and ask that those around you do the same.
- Avoid touching your eyes, nose and mouth. Germs often spread when people handle something contaminated and then touch their eyes, nose or mouth.
- Limit close contact with people who are sick.
- When you have the flu, take precautions to limit exposing others to the virus. If possible, stay home from work and school. It is best to avoid attending public and family gatherings as well as running errands. (University of California, San Francisco)
- Studies have shown that the flu virus can live on surfaces up to 48 hours after it is deposited on a surface. This means it can also potentially infect for up to 48 hours as well. (CDC)
