

RECYCLED RUBBER

Bulletin Boards and Enclosed Message Centers

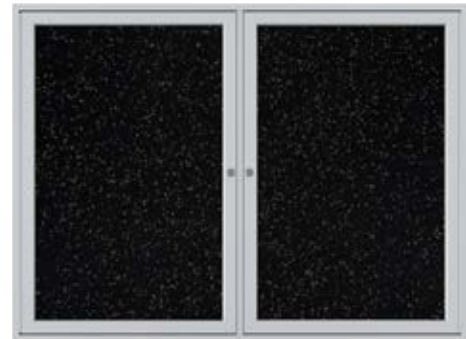

Tackable Surfaces that Meet Sustainability Goals

Tire production is one of the most problematic sources of waste. Ghent's Recycled Rubber Bulletin and Enclosed Boards re-purpose tire waste into a green communication tool that is durable, self-healing and washable. Recycled rubber is an ideal choice in high-traffic, high-use areas such as classrooms and offices.

Environmentally Friendly

All Recycled Rubber Boards are made using 90% recycled tire material and 10% post-industrial content.

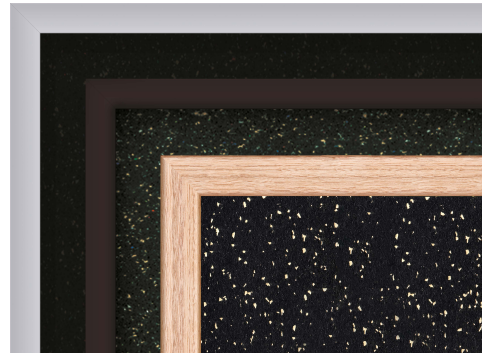

Durable

Boards resist staining and fading and are easily cleaned with a cloth and warm water. Enclosed boards also feature a full-length piano hinge and locking doors for security.

Reliable

Self-healing surface masks pin holes and stands up to years of repeated tacking and use.

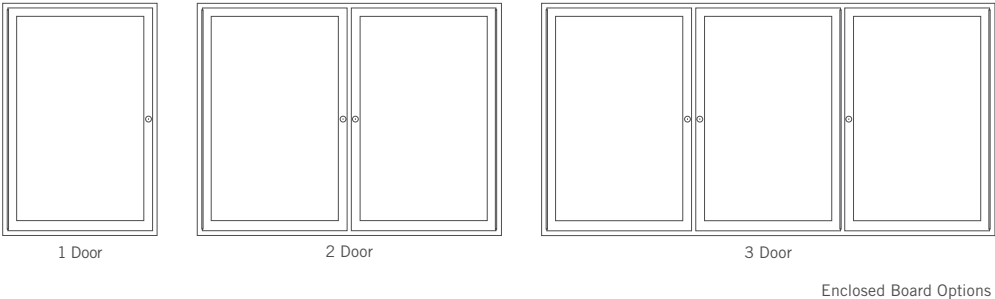

Variety

Available in three surface options, four framing choices, and a variety of sizes that can be hung in multiple orientations.

Recycled Rubber Bulletin & Enclosed Boards

Statement of Line

Features
