

# Stack Plunger

## DESCRIPTION

**Black Swan Stack Plunger** is a lightweight high neck plunger designed to clear clogs in external vent stacks. **Black Swan's Stack Plunger** has a 4" durable blue rubber cup and a 19" sturdy wooden handle. The small design enables easy storage for tiny spaces.

The vent stack is part of the plumbing system and helps to regulate air pressure. It carries out gases and foul odors while allowing fresh air into the system. When external vent stacks get clogged these foul odors and gases remain in the system and can cause your home to smell.
