Screw Eyes

Screw eyes are manufactured with a closed circular eye on one end and a gimlet point lag threaded screw on the other. They are the ideal fastener of choice when attaching cables and ropes to surfaces. It is suggested that a pilot hole slightly smaller than the diameter of the screw be used to prevent splitting or snapping.

Features:

- Zinc plated steel
- Gimlet point for use in wood

Product Dimensions

PN	Overall Length	Shank Length	Thread Length	Thread Dia.	Inside Eye Dia.	Wire Gauge
SE1	2-5/8"	1-1/4"	1-1/8"	0.330	3/4"	0.264
