

WHY DOES A HOME WITH A FIREPLACE HAVE HIGHER HEATING BILLS?

Hot air rises: Your heated air leaks out any exit it can find. When this happens, cold outside air is drawn in to make up for the lost heated air. The fireplace is like a giant straw-sucking the heated air from your house. This is like leaving a window open all year round!

ENERGY TOP
chimney damper

**SAVE ON
UTILITY COSTS**

**FOUR SEASON
PROTECTION**

ENERGY TOP

- 100% SEAL / ENERGY SAVING
- HIGHER OPENING / BETTER DRAFTING
- NO FUSABLE LINK / FASTER INSTALL
- STRONGER SPRING / PUSH THROUGH SNOW & ICE

**SAVE ON
UTILITY COSTS**

The Energy Top Damper is a great way to save money on heating costs. In fact, they usually recoup the cost within 1-3 years. It's a win-win situation. With its soft, pliable rubber gasket, the Energy Top has an air tight "refrigerator" seal. It is attached to the frame and actually compresses and conforms to the lid, forming a strong flexible barrier to the outside elements. No other damper on the market has this type of seal.

- Four Season Protection for your chimney.
- Serves as a chimney cap when closed.
- Easily accessible handle mounts inside of fireplace
- Two types of gaskets making it superior to similar dampers
- Precision engineered mechanism is easier to open and close than throat dampers
- Doesn't require a fire safety control
- Defaults to open position for maximum safety
- Lifetime Warranty

ENERGY TOP PLUS DAMPER

The Energy Top is now available with the additional protection of a built in Stainless Steel Cap. It comes completely assembled as one unit and it's called Energy Top Plus. The Energy Top Plus when closed seals out rain, snow and sleet while sealing in "paid" heat and air-conditioning. When open it has the protection of a conventional chimney cap.
