

**LOW VOLTAGE SENSOR MODULE
FOR BI LEVEL SENSORS
DIMS LIGHT WHEN HOT**

WEC-2TS is an innovative and intelligent temperature management sensor. It helps preserve the LED life of highbays and other fixtures with dimming drivers. It is powered by the common 0-10V interface without the need for an extra power supply. Attach this sensor on the LED board of the fixture and it will reduce the output power of the LED driver to 50% when the temperature reaches 140°F. It will maintain the light output at 50% until the board cools down.

WEC-2TS

Voltage	1~10V DC
Derating Temperature	140°F
IP Rating	IP20
