AT WELLSENSE TECHNOLOGIES  
WE'VE MADE MONITORING  
YOUR WATER STORAGE TANK  
LEVELS AS EASY AS...1-2-3!

**1**

Simply install the Remote Unit onto your water storage tank

**2**

Plug in the home unit to your WiFi router.

**3**

Download the IntelliTank App® to your SmartPhone or handheld device!

24/7 Protection  
of your water supply

WIRELESS  
MONITORING

**BRINGING YOUR  
WATER TANK  
INTO THE  
21<sup>ST</sup> CENTURY**

Patent Pending

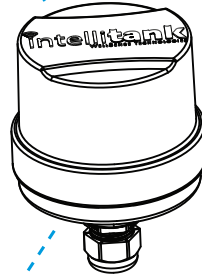

Designed to deliver critical water tank level information 24/7, the IntelliTank wireless tank monitoring system is a complete, simple solution for monitoring and management of your homes water level.

# HOW it WORKS

Battery Powered Remote Unit

## Water Gauges

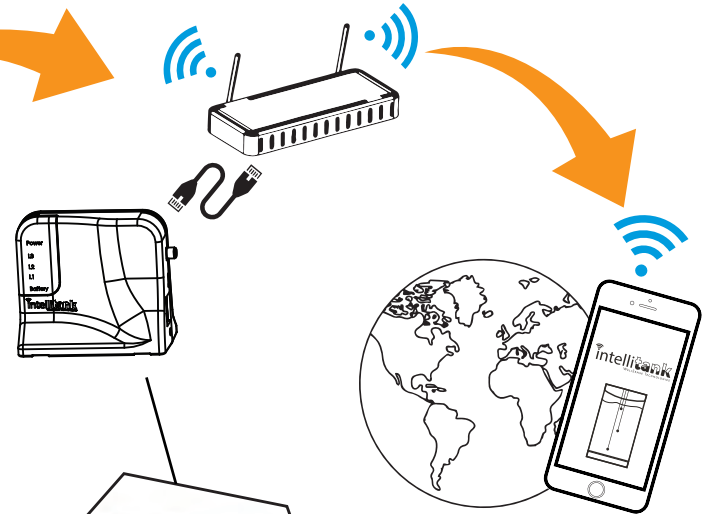

- » Reed Switch Sensor Module. Rugged and built to last! This durable module consists of 3 Stainless Steel float sensors. These sensors consist of 2 primary parts.
- » A float that contains a magnet.
- » A base unit that contains a Magnetic Reed switch.

As your water tank level drops, the float which contains a magnet drops as well. This activates the Reed switch. A signal is then sent to the "remote-unit" which identifies the corresponding water level of that particular float sensor. This technology ensures the three sensors provide accurate water levels, but also multiple read outs to you!

## Wireless Sensor Unit

- » Threads allow for tight seal between the Remote Unit and the top of the water tank as well as acting as a theft deterrent.
- » No Electrical wiring required. Remote Unit operates on 2-AA batteries with low power transmitter for long battery life.
- » Completely Sealed Design protect against any weather conditions.
- » Allows for multiple units to be added under one Phone App for scalable monitoring.
- » Low Battery monitoring from App ensures to always be secure in your IntelliTank System.

IntelliTank iPhone App®

**ALWAYS** connected to check your WATER levels around the world

## Home unit

- » LED Water Level Indicator lights provide a quick visual confirmation of the current water level in your storage tank.
- » The power supply is a standard microUSB port (ie. android phone charger)
- » The Home-Unit is an IoT Gateway (Internet Of Things).

The Home Unit is connected to your WiFi router. Once the Remote Unit sends your water level information to the Home Unit, the Home unit receives that information and then sends it to the internet through your WiFi Router, and ultimately to your wireless device.
