The 1210 sub PSI is a temperature compensated, piezoresistive silicon pressure sensor packaged in a dual-in-line configuration. It is intended for cost sensitive applications where excellent performance and long-term stability are required.

Integral temperature compensation is provided over a range of 0-60°C using laser-trimmed resistors. An additional laser-trimmed resistor is included to normalize pressure sensitivity variations by programming the gain of an external differential amplifier. This provides sensitivity interchangeability of $\pm 1\%$. Differential pressure ranges from 0-5 (12.5mB) to 0-10 (25mB) inches of H₂O are available. Multiple leads, metal or ceramic barbed tubes are available for specific applications.

Please refer to the 1210 1psi and standard datasheet for information on products with operating pressures greater than 1psi.

1. Ratiometric to supply current.
2. Best fit straight line. Non linearity for 10inH₂O is 0.75%
3. Maximum temperature error between 0°C and 60°C with respect to 25°C. Thermal error of offset for 5inH₂O is 2.0%
4. For a zero-to-full scale pressure step change.
5. Long term stability over a one year period with constant current and temperature.
