

# EconoMixer 100™

## Technical Information

**Mounting:** Wall/drum.

**Flow Rate GPM at 40 PSI:** 4.8.

**Approximate Dilution Range at 40  
PSI, 1.0 cp:** Max. 400:1. Min. 4.5:1.

## EconoMixer 100 Coolant Proportioning Mixer and Dispenser

EconoMixer 100 drum or wall mounted proportioners automatically mix liquid coolant concentrates with water and dispense the diluted solution into any sump or container.

- Increased productivity of employees
- Efficient use of space
- Enhanced safety
- Maximized cleaning product performance
- More conscientious response to environmental concerns.

## Better performance of concentrated products

Manual mixing of concentrates with water is time consuming and imprecise — the strength of the diluted solution may be too strong or too weak. Automatic proportioning with the EconoMixer 100 removes these issues, so the mixed coolant consistently delivers optimum performance.

Any size container of concentrate, including a 55 gallon drum, can be used with the EconoMixer 100 because there's no need to tip the container to pour the contents. EconoMixer 100 uses water power, not electricity, so concentrates don't have to be located near outlets, just within a hose's reach of a water source. Concentrates are safer to use with the EconoMixer 100, too. Exposure to the concentrated product is limited only to those times when the proportioner is being moved from one concentrate container to another.

## Economical to use, and environmentally friendly too!

EconoMixer 100s are built with high quality, chemically resistant materials and have a long life in demanding industrial environments, so they're inexpensive to operate and maintain as well as to purchase. Beyond the economic benefits of using EconoMixer 100s, their contribution to the easier, more effective use of concentrates makes environmental sense. Use of concentrates reduces solid waste by minimizing packaging which must be disposed of or recycled.
