DESCRIPTION

Designed for heavy duty sensing applications, the Heavy Duty Length Sensor, Model ZMH, is versatile and easy-to-use.

It features a built-in spring-loaded torsion arm that provides a simple-to-adjust torsion load, allowing the unit to be mounted in almost any orientation, including upside down. Using a properly selected wheel, the ZMH can be used on almost any surface, while operating at speeds up to 3000 feet per minute. Whether you need to measure speed, position, or distances, the Model ZMH is the ideal solution.

Open Collector Output Wiring

The ZMH sensors have open collector outputs. An open collector output brings the uncommitted collector of the encoder switching device to the external world. Because the collector element is not associated with the sensor supply voltage, the sensor output collector may be "pulled up" to external voltages different than the encoder supply voltage (30 VDC maximum). NPN open collector outputs are current sinking devices. An output signal will not be generated unless a pull-up resistor is connected from the open-collector to the positive side of an external supply. The same supply can be used for powering the unit and for the pull-up resistor.

LENGTH SENSOR MEASUREMENT ACCURACY

Factors which affect measurement accuracy include Measuring Wheel accuracy and wear, and material conditions. Ideally, materials which are hard, thin and strong provide good readings, conversely, soft, thick and elastic materials can present problems in obtaining true readings. Where this effect is constant, Counter or Rate Indicators with "input scaling" can compensate for Measuring Wheel wear and material elastic and compliance errors. In addition, English/Metric conversions may also be accomplished.

SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in the literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

SELECTING APPROPRIATE WHEEL SIZE & PPR (Pulses Per Rev.) OF ROTARY PULSE GENERATOR

When the desired output of a length sensor and wheel combination is either in feet or inch units, selection of the proper combination is relatively straight forward. For example, with a 1-foot wheel circumference, a 1 PPR Rotary Pulse Generator will deliver 1 pulse/ft, 12 PPR would deliver 12 pulses/ft (1 pulse/inch); 100 PPR would yield 100 pulses/ft; and 120 PPR would permit measuring to 1/10th of an inch (1/120th of a foot).

ZMH INSTALLATION

INSTALLATION:

- Slide ZMH over a fixed $\text{Ø}5/8$ " ($\text{Ø}0.625 \pm 0/-0.005$ ") shaft. The optional ZMH Mounting Bracket (MBZM0001) is shown in the picture.
- While rotating the ZMH clamp to apply a spring load, securely tighten the two clamp bolts with a $5/32$ " (supplied) or 4 mm hex "L" key.

Note 1: A $1/2 - 20$ bolt can be threaded into the end of the clamp to aid in loading the spring as shown. If a $1/2 - 20$ bolt is not handy, then a $\text{Ø}0.45$ " or smaller rod, bolt, screw driver etc. works as well.

Note 2: The spring should not be preloaded too much or it may come in contact with the spring limit pins and the ZMH will not have sufficient travel to accommodate variations in the surface height of the material being measured. For most applications, the spring setting in its mid-range (5-6 lbs.) is sufficient.

DOUBLE WHEEL PIVOT INSTALLATION (MBZM0002):

Note: It is recommended that double wheel ZMH's be installed with the optional Double Wheel Pivot. The pivot allows the unit to rotate freely to maintain equal pressure on both wheels, accommodating uneven/angled surfaces and mounting misalignment.

1. Thread the pivot clamp into the end of the ZMH's clamp by hand until the threads just bottom out then back out approximately 1 revolution to allow for rotation after installation.
2. Slide the pivot clamp over a fixed $\text{Ø}5/8"$ ($\text{Ø}0.625 +0/-0.005"$) shaft. The optional ZMH Mounting Bracket (MBZM0001) is shown in the picture.
3. While applying a load to the spring, securely tighten the two clamp bolts with a $5/32"$ (supplied) or 4mm hex "L" key.

CONNECTOR EXIT ORIENTATION ADJUSTMENT:

1. Slide the ZMH over a $\text{Ø}5/8"$ ($\text{Ø}0.625 +0/-0.005"$) shaft and tighten the clamp bolts with the supplied $5/32"$ hex "L" key.
2. Remove the measuring wheel(s) using the supplied $3/32"$ hex "L" wrench to loosen the set screws.
3. Remove 6 screws (3 on each side) from the side plates using the supplied $7/64"$ hex "L" key.
4. Rotate body of encoder to desired orientation, aligning bolt pattern with one of six unique positions (see inset drawing).
5. Replace side plate screws and measuring wheel(s), making sure to tighten screws securely.
