

Your Lab's *solution*

When caught in a chemical eye burn, your initial reaction is to head to sink, instead of designated eyewash stations. The Eyesaver SEF-1850 is designed for your instincts. With the ability to be installed into most single-hole laboratory faucets, the Eyesaver is right where you expect it should be. The Eyesaver features a dual aerated eyewash with a fully functional lab faucet that operates independently and simultaneously. Two separate water supplies ensure that cold to tepid water will constantly flush to the eyes, regardless if hot water is running from the faucet. The Eyesaver is 100% ANSI Z358.1 Certified and features a lead-free brass construction.
